SUMMARY

High-performance AI Engineer and Cloud Ops specialist focused on architecting agentic systems, parallelized LLM pipelines, and enterprise-grade automation. Expert in orchestrating multi-agent workflows and deploying scalable cloud infrastructure with a focus on high-speed inference and secure, resilient architectures.

TECHNICAL SKILLS

Programming: Python, C, C++, Java, HTML, CSS, Tailwind, React

AI/ML: YOLO, TensorFlow, HuggingFace, LangChain, OpenCV, EasyOCR, scikit-learn

Agentic AI Microsoft Agent Framework, CI/CD for AI Agents, Openclaw, AI Foundry- Auto Evaluation, Testing, Guardrails, Hosted Agents, Native Agents, AGUI (Copilotkit), Agent Package Manager

Cloud & DevOps: Microsoft Azure, Google Cloud, CI/CD, GitHub Actions

Security SAST, DAST, Bandit, OSV, PyRIT

Frameworks: Flask, Streamlit, Dash, FastAPI

Databases: SQL, MongoDB

Agentic AI: Microsoft Agent Framework, Multi-agent orchestration

Other: Bash, Kali Linux, ESP32, Arduino

EXPERIENCE

AI Engineer Intern

March 2026 – Present

ATOS

Developed AI-driven automation workflows for cloud-based infrastructure management in an enterprise environment

Integrated cloud AI services to enable intelligent decision-making and reduce manual effort

Designed scalable automation pipelines improving system efficiency and responsiveness

Collaborated within a professional engineering team while adhering to strict security and confidentiality standards

Worked on real production software, deployment to dev handled by me, environment promotion done by coworkers

PROJECTS

Automatic Number Plate Recognition (ANPR)

Python, YOLOv8, EasyOCR, ESP32-CAM

Built a real-time ANPR system using YOLOv8 for detection and EasyOCR for text recognition

Integrated ESP32-CAM for live video streaming and edge-based capture

Improved model accuracy through custom dataset training and tuning

Interdisciplinary Subject Selection System

HTML, Tailwind CSS, PHP, MySQL, AJAX

Developed a full-stack web platform for course selection with admin and student dashboards

Handled workflows for 2500+ students with secure authentication and database management

Deployed on VPS and maintained system with continuous updates

VidIntelligence | Enterprise YouTube AI Studio

Python, Groq AI, MAF, LangChain, Dash

Engineered a high-performance video synthesis studio utilizing the Microsoft Agent Framework (MAF) for multi-agent orchestration and parallelized LLM pipelines.

Architected context-aware Q&A and automated PDF executive reporting for industrial-scale content analysis.

Optimized processing throughput using Groq LPU inference and recursive text-splitting for long-form video synthesis.

Agentic AI Portfolio & Experience Hub

React, Framer Motion, Supabase, Tailwind CSS, Vite

Engineered a high-end, Apple-inspired portfolio featuring cinematic scroll animations and complex state-driven UI/UX.

Developed a dynamic backend integration with Supabase for real-time project fetching and experience management.

Optimized for high-speed performance and professional digital presentation across all device viewports.

EDUCATION

Adamas University <i>B.Tech in Computer Science and Engineering (CGPA: 8.3)</i>	2023 – 2027
Kalyani Public School (CBSE) <i>Class XII – 69.4%</i>	2021
Cygnets Day School (ICSE) <i>Class X – 74%</i>	2019

CERTIFICATIONS

- NPTEL Elite Certification – Advanced C++
- C Programming Certification – Great Learning
- GDSC Cohort '25
- Robotics using AutoCAD
